File Naming Conventions

View and controller files

- All component (div module) files name should be started with a underscore (_).

```
views/_header.php
controller/_header.php
```

CSS and JavaScript files

- Like views and controller, all files which dedicated to a specific module must be started with a underscore too.

Image Files

According to image characteristics, we have following prefix for image files:

- ico_ : Icon images
- bg_ : Background images
- title_ : Title images
- li_ : List item images
- sep_ : Separator images
- sp_ : CSS sprite images
- btn_ : Button Images

Image File Name Grammar

```
[type]_([module])_[nonu]_[status].png
```

- Use these words as verb: add, modify, and remove.
- Don't use these words as verb: create, update, delete, get, and set.
- Examples:
  - ico_folder.png
  - ico_folder_add.png
  - ico_folder_remove.png
  - ico_folder_modify.png
  - ico_home_folder_add.png
